13.5: TI RDMA Basic Interoperability

Subnet Manager	Result
OpenSM	PASS with Comments
Result Discussion:	

All devices were shown to correctly exchange core RDMA operations across a simple network path under nominal (unstressed) conditions; each HCA acted as both a client and a server for all tests. Failures between all HCAs performing small ib_send_bw operations were observed. This is a known bug with OFED 3.5-2 and can be found here: bug 2457.

13.6: TI RDMA Stress

Subnet Manager	Result
OpenSM	PASS
Result Discussion:	

All IB switches were seen to properly handle a large load as indicated by the successful completion of control communications between two HCAs while all other HCAs in the fabric were used to generate traffic in order to put a high load on the switch. Each HCA acted as both a client and a server for the control connection.
